DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to wireless ambient condition detector, classified in class 340, subclass 628.
 - II. Claims 10-19, drawn to inter-node communication, classified in class 455, subclass 7.
 - III. Claims 20-25, drawn to ambient condition detecting and inter-node communication, classified in class 340, subclass 539.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and I, II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it drawn to determining a non-final recipient node. The subcombination has separate utility such as ambient condition detecting and inter-node communication.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
